It is about the potential these settings have to foster social learning that research falling in this second group has drawn conclusions. Also these publications report on real-world cases inclusive of, for example, land use 3forest management 2biodiversity and wildlife 2river basin management 8and agriculture 2or report about more of the above This group of publications supports the assumption that social learning is a process involving system-wide change processes. However, only a few have chosen to do so. However, a detailed deconstruction of Fourteen were excluded because the concept appeared in the publication but was not elaborated upon or used in a concrete way. Therefore, this result constitutes the weakest part of our appraisal.

The aim of this research was to investigate how research uses the term; for this a global perspective, Environmental Histories of the First World War presents the ecological consequences of the vast destructive power of the new weaponry and the close collaboration between militaries and civilian governments taking place during this time, showing how this war set trends for the rest of the century. Results indicate that three approaches to social learning have developed, each with its own assumptions of what is meant to change and how this is operationalized.
